RAAH
TECHNOLOGIES

FINANCIAL SERVICES IDENTITY, SECURED

REDUCE RISK. ACCELERATE ONBOARDING. BUILD DIGITAL TRUST.

Banks and financial institutions rely on secure, streamlined identity to serve customers, protect data, and meet compliance. But fragmented access, manual processes, and poor user experiences introduce operational and regulatory risk. RAAH Technologies helps unify and modernize identity across your ecosystem.

IAM: INTERNAL WORKFORCE ACCESS

The Business Issue: New hires often face access delays, while departed employees retain credentials across systems.

The Business Impact: Slow onboarding hurts productivity. 34% of breaches in finance involve insiders—often linked to poor deprovisioning or over-access.

The Solution & How RAAH Helps:
We automate access provisioning and deprovisioning based on HR events and role changes. Institutions see up to 75% faster onboarding and fewer audit issues.

CIAM: CUSTOMER IDENTITY EXPERIENCE

The Business Issue: Digital onboarding and login flows are either too complex or not secure enough.

The Business Impact: 68% of users abandon account opening due to friction. In parallel, $12.5B was lost to fraud in 2024, much of it targeting financial accounts.

The Solution & How RAAH Helps:
We deploy secure CIAM frameworks: passwordless login, adaptive MFA, and identity verification that reduce fraud and increase conversion.

IGA: IDENTITY GOVERNANCE & LIFECYCLE

The Business Issue: Access certifications, role changes, and deprovisioning are handled manually and inconsistently.

The Business Impact: 57% of organizations cite excessive access as a top concern. These governance gaps lead to failed audits, insider risk, and compliance challenges.

The Solution & How RAAH Helps:
We automate lifecycle management and access reviews, enforce least privilege, and deliver audit-ready logs and reports that cut deprovisioning time by up to 95%.

PAM: SECURING CRITICAL ACCESS

The Business Issue: Privileged credentials are often unmanaged, shared, or left exposed across systems.

The Business Impact: 80% of breaches involve privileged access. Insider threats cost financial firms $17.4M annually on average.

The Solution & How RAAH Helps:
We implement PAM solutions with just-in-time access, session monitoring, and credential vaulting—minimizing breach risks and ensuring regulatory control.
